Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: After reviewing the claims, the claims were found to be allowable since no prior art could be found teaching or suggesting a myoelectric-pattern classification method and apparatus comprising: extracting a feature pattern from the measured myoelectric pattern, using redundant coding to encode the extracted feature pattern into a bit pattern, performing pattern classification on the encoded bit pattern, as claimed in Claim 1; and a feature pattern extraction apparatus that extracts a feature pattern from the measured myoelectric pattern, an encoder that uses redundant coding to encode the extracted feature pattern into a bit pattern, and a pattern classifier that classifies the encoded bit pattern and generates an output control signal, as claimed in Claim 2.

The use of redundant code to encode the extracted feature pattern into a bit pattern further distinguishes the claims from the prior art because redundant code differs from Gray code in that redundant code only used four-bit codes from 0-7, whereas Gray code encodes numbers from zero to an infinite value. Furthermore, the end product for a redundant code is different from Gray code, in particular for feature value numbers 3-7. See Tables 1 and 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art of Bozeman, Jr. discloses a means of sensing myoelectric patterns and normalizes the sensed signals in order to generate an output, but fail to disclose the use of redundant coding to encode the extracted feature pattern from the measured myoelectric pattern into a bit pattern, and classifying the encoded bit pattern.
